Regarding pesticide analyse.

I have come to a knowledge regarding the pesticide analysis you are sending me every month, and it does not analyse for every pesticide that can be found, therefore you have to change the method. I am comparing the latest result I have sent to you, with the latest result you have sent to me, (sweet basil) and I have found that in your analysis you don't screen for: azoxystrobin, imidacloprid, chlorantraniliprol, dimethomorph and dinotefuran. So please use the same methods as I, and solve this problem.

If you have any questions, just contact me

Best regards Diana Thailandia
